

Explanation

Name the different rules for simplifying operations with integers. (Bonus: Come up with a way to remember these rules)

Interpretation

What are the integer operations?

Application

Where in the real world would you use an integer operation?  
(Bonus if you use negative numbers)

Topic  
**Integers**

Empathy

How might adding/subtracting feel about multiplying/dividing with negative numbers?

Perspective

If there were no negative numbers, how would:  
1) banks report debt  
2) temperatures report below freezing  
3) elevation below sea level be calculated?  
(pick one)

Self-Knowledge

Which operation are you best at? Worst at?
